

Need for an Integrating Resource

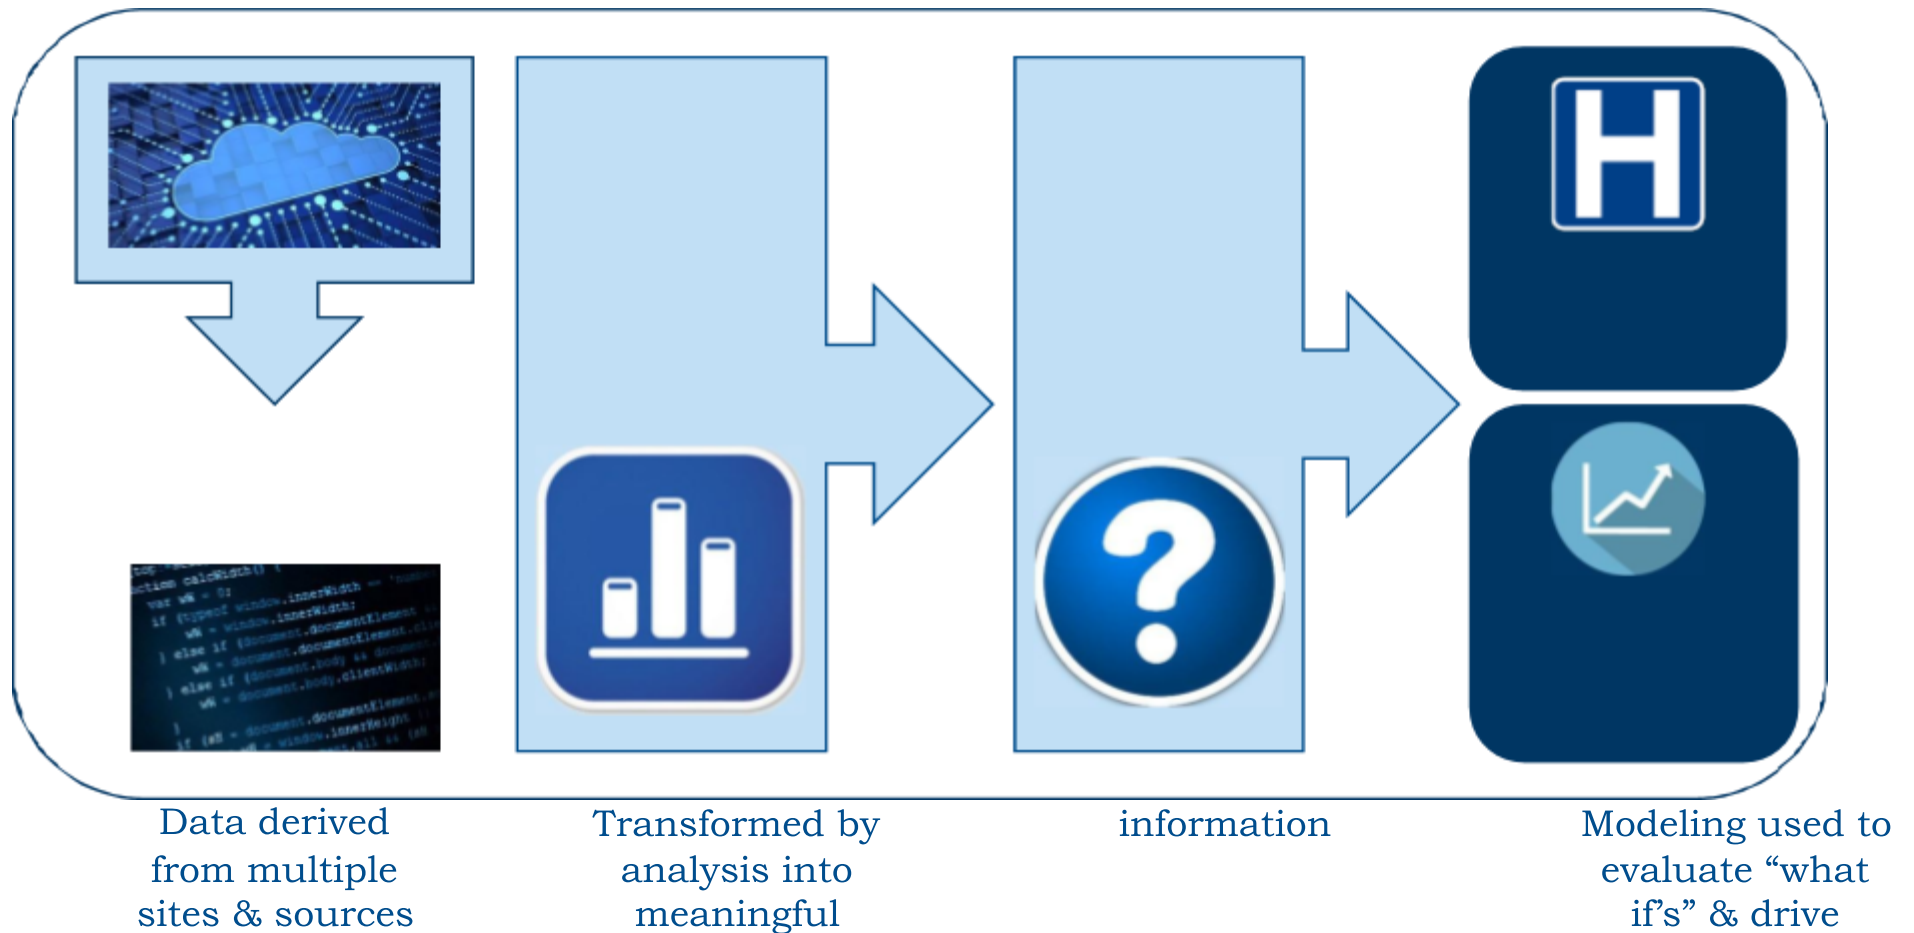

(targeted outcomes)

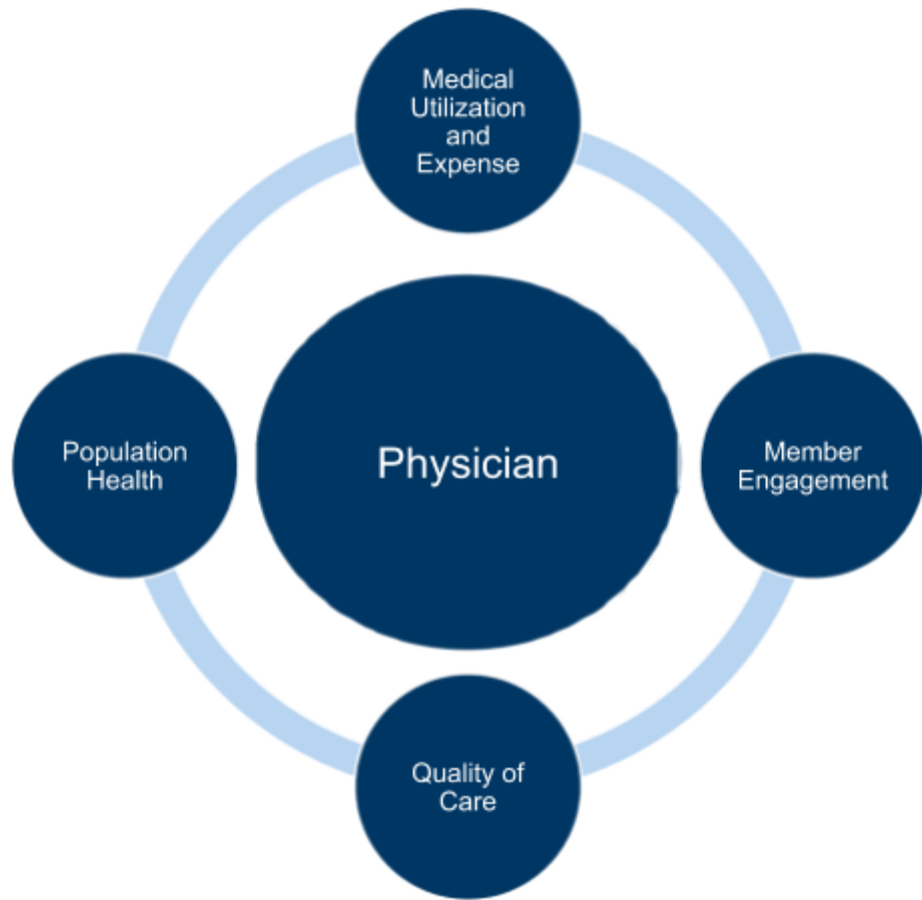

- Analyze both clinical and financial data with a multi-stakeholder approach that presents clinical acuity **details** alongside total cost
- Identify opportunities for cost savings **to the specific** individual provider or member level
- Highlight deviations **and outliers** in quality of care, provider versus peer benchmarks and provider behavior patterns
- Reduce cost per member **using** actionable metrics that can help limit overutilization, unnecessary care, and deviations from best practices
- Drive **member and provider** behavior change to remain competitive amid evolving reimbursement, regulatory mandates, cost burdens and shifting risk
- Manage Risk/Value-Based Arrangements efficiently

Converting Data to Actionable Information

(targeted outcomes)

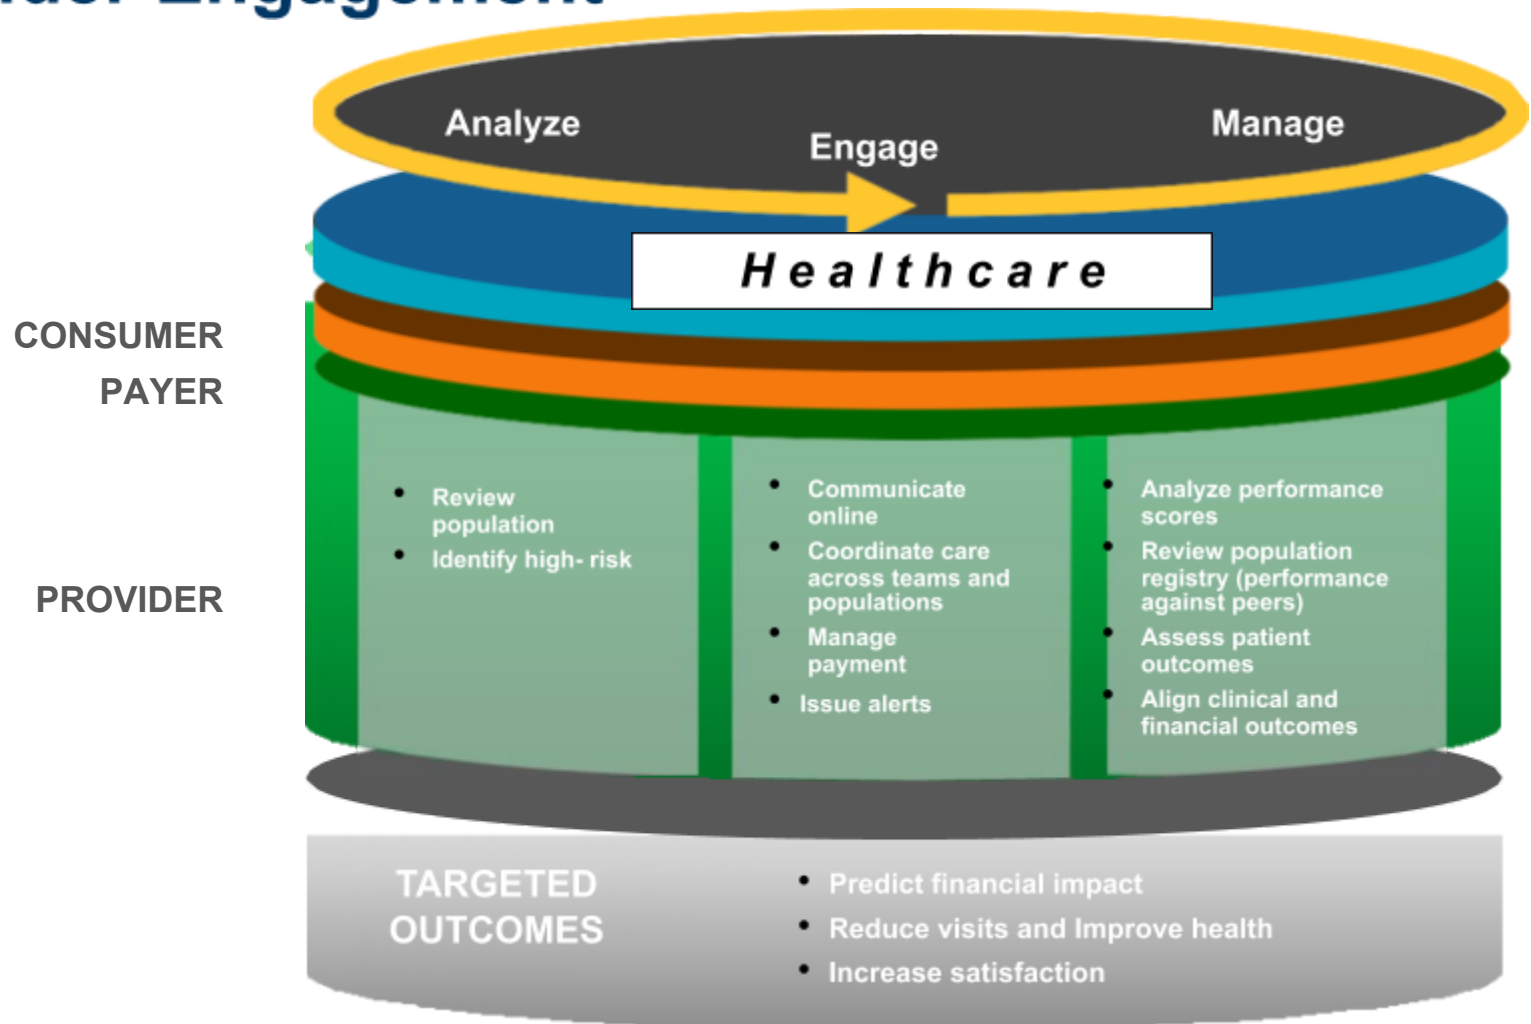

decisions leading
to change

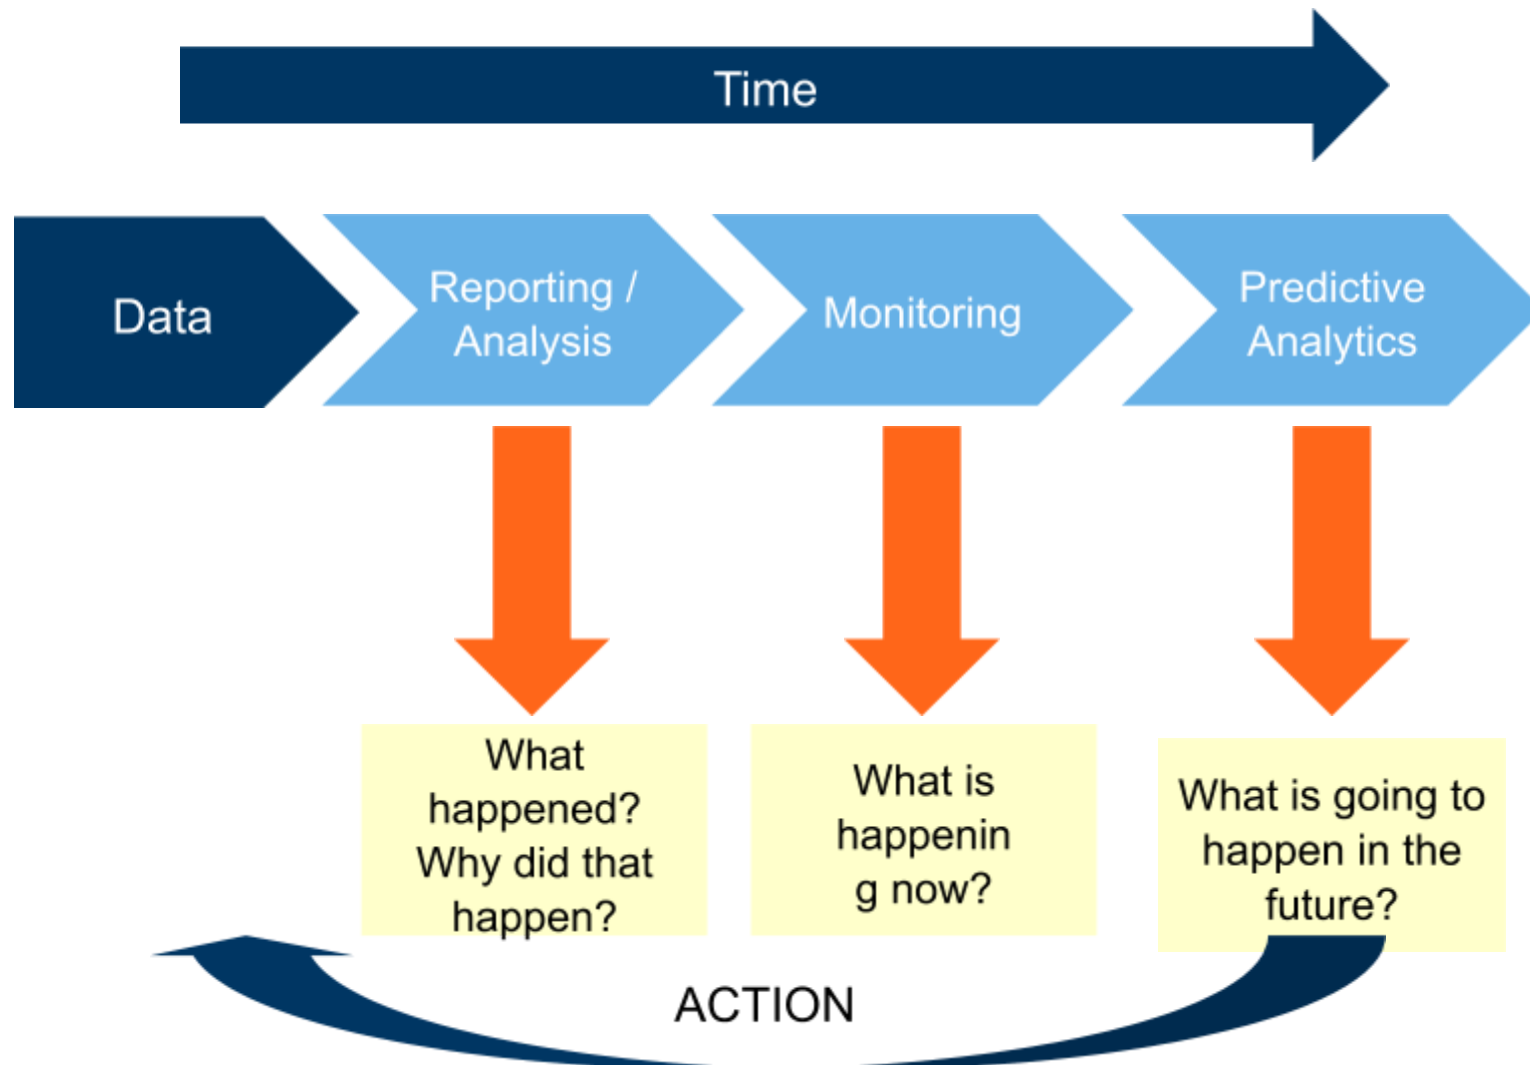

- Enabling data transparency between payers and providers
- Providing the ability to manage multiple risk contracts on a single platform
- Comparing how a provider is performing in relation to their peers
- Delivering a holistic view of patient/person-centric data across the continuum of care
- Using predictive modeling to proactively manage care
- Giving providers access to the data in a way they can act on it, to make more informed decisions that directly impact cost and utilization and quality

Provider Engagement

Predictive Analytics

Based Contracting

- 1) The capability to tie financial and clinical performance together to identify and address clinical drivers of cost and quality
- 2) A holistic view of a patient across the continuum of care to fully understand and make decisions based on medical care needs
- 3) The ability to track and manage HEDIS and Quality measures by provider and patient as well as identify gaps in care
- 4) Predictive model to stratify the population by projected cost, risk, and chronic conditions
- 5) Provider performance metrics for better visibility into quality outcomes as well as cost and utilization patterns of providers to identify outliers
- 6) A platform that allows “providers” to view all their contracts across, performance levels, LOB, location, and individual patients
